Morningstar Rating Overall⁵ ★★★★★

Investment Strategy

The Systematic Return strategy aims at share-based earnings. This strategy enables investors to participate in the profits of companies over the long term, with lower long-term risk parameters than with individual investments.

Performance in % since inception (01/04/2015)

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

Aims for steady income from European equities

Evaluation by MSCI ESG Research

MSCI ESG Rating (AAA-CCC)	AA
ESG Quality Score (0-10)	8.1
Environmental score (0-10)	6.9
Social score (0-10)	5.6
Governance score (0-10)	6.3
ESG Rating compared to Peer Group (100% = best value)	99.28%
Peer Group	Mixed Asset EUR Flex - Global (1536 Funds)
ESG Coverage	98.79%
Weighted Average Carbon Intensity (tCO ₂ e / \$M sales)	86.39

ESG Rating What it means

AAA, AA	Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Investment Approach

RB LuxTopic - Systematic Return has a clearly structured investment process. It is based on the three building blocks:

- F undamental
- S ystematic
- R isikoadjusted
- F undamental - European top companies

RB LuxTopic - Systematic Return invests in large European groups with strong brands and a stable market position. These companies are often market leaders. They operate globally and generate their earnings not only in Europe, but worldwide. Above all, they are characterized by strong substance, high earnings power, steady growth and attractive dividends.

S ystematic - Systematic Stock Selection - Algorithm

A systematic selection process selects the strongest-trending stocks from the given stock spectrum. The aim of this algorithm is to overweight stronger long-term companies and to underweight or sort out underperforming stocks.

R isikoadjusted - Active Risk Management

Active risk management can be used. If the setback in a falling stock market is smaller due to risk reduction, the investment starts from a higher level when the stock market later rises again.

Opportunities

- + Intelligent investment strategy that systematically adapts to the current situation on the markets
- + Special expertise of the company, as a specialist in systematic and risk-adjusted strategies
- + Stable investment concept, proven in many stock market phases

Risks

- Shares bear the risk of stronger price declines
- Price risks of bonds in the event of rising interest rates
- Country, credit and liquidity risks of issuers

Fund Manager

Robert Beer
Responsible Since 01/04/2015

For more than 25 years, analysis models have been developed within the company. Dipl. Ing. Robert Beer and Dipl.-Inf. (FH) Peter Lukas lead the analysis and are supported by the whole team. The focus is on systematic and rule-based programs, emphasizing active title selection and consistent risk management. This allows an outperformance of standard indices to be achieved in the long term. Return and risk must be considered as an overall concept. Reconciling both is our recipe for success. This is backed up by intensive research work. The results are systematic and risk-adjusted investment solutions. This is how a specialized investment boutique was created.

Monthly Commentary

After a strong first quarter, the international stock markets largely went into reverse in April. The development of US inflation was a particular burden, but Iran's attack on Israel also briefly caused high volatility. The German stock index DAX closed the month down -3.03%, while the broad European share index Stoxx Europe 600 fell by only -1.52%. In the USA, the S&P 500 fell by -3.11%. By contrast, Hong Kong's Hang Seng Index provided a counterpoint, rising by 8.63%. Overall, global equities, as measured by the MSCI World, fell by -2.86% - all index figures in euro terms. With the correction on the equity markets, risk premiums on corporate bonds and US high-yield bonds widened on the bond markets and interest rates on 10-year US Treasuries rose. The equity markets were burdened above all by the development of US inflation. In March, the inflation rate rose to 3.5% (February: 3.1%) compared to the same month last year. Core inflation, excluding the more volatile prices for food and energy, remained unchanged from the previous month at 3.8%. The US labour market remained stable in March with over 300,000 new jobs created. And the US economy grew by 1.6% in the first quarter compared to the previous quarter - weaker than expected, but significantly stronger than the eurozone, whose economy grew by 0.3% and was thus able to avoid a technical recession. As a result, expectations for interest rate cuts in the US declined even further and largely changed to the view that the US key interest rate plateau would remain at the current level of 5.25 to 5.50% for the time being. For the eurozone, however, the markets continue to expect a rate cut, which is expected to be announced at the June meeting of the European Central Bank. Inflation data supported these expectations, as inflation in the eurozone fell from 2.6% in February to 2.4% in March and stagnated at this level in April (compared to the same month in the previous year). Core inflation fell from 2.9% to 2.7%. The greatest inflationary pressure in the eurozone recently came from the services sector at 3.7% year-on-year. The Purchasing Managers' Index for this sector has been in expansionary territory since February of this year, i.e. above the threshold of 50 points, and rose to 53.3 (from 52.9) points in April. In contrast, the Purchasing Managers' Index for the manufacturing sector has remained stable in recessionary territory since August 2022 and currently stands at 45.7 points. In China, the official purchasing managers' index weakened slightly to 50.4 points, but remained in positive territory (previous month: 50.8). Its counterpart for services fell to 51.2 in April after 53.0 points in March. The Chinese economy grew more strongly than expected in the first quarter at 5.3% compared to the previous year and 1.6% compared to the previous quarter. Growth in fixed asset investments, tax relief and strong exports were the main drivers behind this. What kept the markets on tenterhooks in the middle of the month was Iran's attack on Israel and Israel's response, which caused the VIX volatility index to spike to its highest level of the year and drove up the price of oil. The price of Brent crude was around USD 87 at the beginning of the month and reached USD 92 around the time of the attack, but fell back to USD 86 at the end of the month. Gold was also in high demand. Over the month as a whole, the price of a troy ounce rose by 2.53% to USD 2,286.25, but was quoted at USD 2,390 in the meantime.

Legal Information
