The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 6.00%, he has to spend a one-off amount of Euro 60.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

Evaluation by MSCI ESG Research

MSCI ESG Rating (AAA-CCC)	AA
ESG Quality Score (0-10)	7.3
Environmental score (0-10)	6.7
Social score (0-10)	5.5
Governance score (0-10)	6.0
ESG Rating compared to Peer Group (100% = best value)	68.06%
Peer Group	Mixed Asset EUR Cons - Global (598 Funds)
ESG Coverage	88.68%
Weighted Average Carbon Intensity (tCO ₂ e / \$M sales)	106.41

AAA	19.63%	BB	5.38%
AA	28.08%	B	0.00%
A	21.64%	CCC	0.00%
BBB	13.94%	Not Rated	11.32%

ESG Rating What it means

AAA, AA	Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Opportunities

- + Asset management character through active risk management
- + Participation in the growth opportunities of the global equity and bond markets - the fund is not fixed on one region or country
- + The selection and weighting of asset classes and securities is based on the fundamental
- + monetary and market analysis this FMM approach has proven its worth for approx. 50 years.
- + proven

Risks

- Share prices can fluctuate relatively strongly due to market conditions
- Currency risks due to foreign content in the portfolio
- Price risks for bonds, especially in the event of rising interest rates on the capital market
- Country risks of issuers
- Previously proven investment approach does not guarantee future investment success

DJE Invest - Karitativ

Mixes mainly global bonds, stocks and funds

DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on around 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

Monthly Commentary

After a strong first quarter, the international stock markets largely went into reverse in April. The development of US inflation was a particular burden, but Iran's attack on Israel also briefly caused high volatility. The German stock index DAX closed the month down -3.03%, while the broad European share index Stoxx Europe 600 fell by only -1.52%. In the USA, the S&P 500 fell by -3.11%. By contrast, Hong Kong's Hang Seng Index provided a counterpoint, rising by 8.63%. Overall, global equities, as measured by the MSCI World, fell by -2.86% - all index figures in euro terms. With the correction on the equity markets, risk premiums on corporate bonds and US high-yield bonds widened on the bond markets and interest rates on 10-year US Treasuries rose. The equity markets were burdened above all by the development of US inflation. In March, the inflation rate rose to 3.5% (February: 3.1%) compared to the same month last year. Core inflation, excluding the more volatile prices for food and energy, remained unchanged from the previous month at 3.8%. The US labour market remained stable in March with over 300,000 new jobs created. And the US economy grew by 1.6% in the first quarter compared to the previous quarter - weaker than expected, but significantly stronger than the eurozone, whose economy grew by 0.3% and was thus able to avoid a technical recession. As a result, expectations for interest rate cuts in the US declined even further and largely changed to the view that the US key interest rate plateau would remain at the current level of 5.25 to 5.50% for the time being. For the eurozone, however, the markets continue to expect a rate cut, which is expected to be announced at the June meeting of the European Central Bank. Inflation data supported these expectations, as inflation in the eurozone fell from 2.6% in February to 2.4% in March and stagnated at this level in April (compared to the same month in the previous year). Core inflation fell from 2.9% to 2.7%. The greatest inflationary pressure in the eurozone recently came from the services sector at 3.7% year-on-year. The Purchasing Managers' Index for this sector has been in expansionary territory since February of this year, i.e. above the threshold of 50 points, and rose to 53.3 (from 52.9) points in April. In contrast, the Purchasing Managers' Index for the manufacturing sector has remained stable in recessionary territory since August 2022 and currently stands at 45.7 points. In China, the official purchasing managers' index weakened slightly to 50.4 points, but remained in positive territory (previous month: 50.8). Its counterpart for services fell to 51.2 in April after 53.0 points in March. The Chinese economy grew more strongly than expected in the first quarter at 5.3% compared to the previous year and 1.6% compared to the previous quarter. Growth in fixed asset investments, tax relief and strong exports were the main drivers behind this. What kept the markets on tenterhooks in the middle of the month was Iran's attack on Israel and Israel's response, which caused the VIX volatility index to spike to its highest level of the year and drove up the price of oil. The price of Brent crude was around USD 87 at the beginning of the month and reached USD 92 around the time of the attack, but fell back to USD 86 at the end of the month. Gold was also in high demand. Over the month as a whole, the price of a troy ounce rose by 2.53% to USD 2,286.25, but was quoted at USD 2,390 in the meantime.
